

Expandable to your wishes.

Due to the ingenious construction of VisionAir¹ and VisionAir² the following options can be fitted in.

OdourFree

When smells that are more pervasive need to be taken out, then one can equip the VisionAir¹ and VisionAir² with an OdourFree filter.

No superfluous luxury in, for example, crowded meeting rooms, nursing homes, canteens and other busy places.

SterilAir

UV-light kills micro-organisms, such as bacteria, viruses and fungi. This considerably reduces the number of indoor air problems. Areas of application include medical institutions and 'garden-style offices', to reduce the harmful influence of micro-organisms on human beings.

TNO Delft, a renowned research institute in the Netherlands, has tested the Euromate Air Cleaners fitted with UV-lighting. Their report can be downloaded from the Euromate website (www.euromate.com).

AirMonitor

The AirMonitor automatically ensures an optimum condition of the air. When you switch it on, the air cleaner operates without a further need for manual control. The AirMonitor measures the pollution continuously and adjusts the fan speed accordingly, so that you do not have to bother with controlling the air cleaner.

Clean air with a pleasant fragrance.

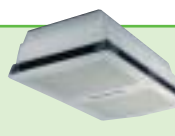

Each Euromate Air Cleaner is provided with an activated carbon filter to take out unpleasant smells. FreeBreeze is standard with VisionAir¹ and VisionAir². That is why the purified air will always smell wonderfully fresh.

Filter maintenance: everybody can do it.

One of the priorities in the design of the new air cleaners and the disposable filter was user-friendliness. Dirty filters can be replaced in no time by clean ones. The X-Changer, which is a standard feature of each VisionAir¹ and VisionAir², indicates when the disposable filter needs replacing.

Experience the difference with traditional air cleaners:

- spectacular performance: better than all other air cleaners with disposable filters
- three unique models: Grace, VisionAir¹ and VisionAir²
- extensive range of floor, wall and ceiling models (built-in and mounted)
- easy to maintain: replacement of the filters is simple
- splendid design that fits in any interior
- user-friendly remote control
- easy to maintain: replacement of the filters is simple
- low noise level

Clean air has a liberating effect. Experience it too.

Indoor air pollution is underestimated.

Increasingly one realises that all kinds of complaints, such as headaches, irritations to eyes and bronchi, loss of concentration and tiredness, may be the result of indoor air pollution. Measurements show that the air in offices, schools, hospitals, pubs, clubs and restaurants, etc., is often more polluted than the air outside. In the indoor air, millions of invisible harmful particles are floating, including dust, micro-organisms such as bacteria, viruses and fungi, pollen, hairs, aerosols and, last but not least, tobacco smoke. On average, one spends 90% of the time indoors...!

The ideal climate is a Euromate climate.

Euromate Air Cleaners remove all kinds of pollution from the air and end the annoying discussions on smoking. With their sensational effect they contribute to a healthier living and working environment, in which everybody feels better and more energetic. Euromate Air Cleaners have a noticeable positive effect on work performance, productivity and reduction of illness-related absence. When you choose Euromate, you emphasise your healthy view on work conditions. You also show that you care about the well-being of your employees and visitors.

Everybody will breathe with relief.

A breakthrough in air cleaning... Euromate breaks with tradition... and introduces a revolutionary, innovative line of air cleaners distinguishable by performance, design, noise level, ease of operation and flexibility.

Unparalleled performance.

Since 1975, Euromate has built a world-wide reputation with their electrostatic air cleaners through continued investments, research and innovative thinking. The new Euromate disposable filter is made of extra sturdy material that is folded in such a way that a very large effective surface is created. The result: low air resistance and a high dirt trapping capacity. The filters have an anti-bacterial coating to prevent bacteria growth. With their ingenious design, the new Euromate Air Cleaners

remove pollutants considerably better than the traditional air cleaners do*. The disposable filter technique is pre-eminently suitable in dusty areas.

Perfect air cleaning in every situation.

Your specific wishes and requirements can be accommodated with the Euromate Air Cleaners. For a start, there is the choice of three unique models: Grace, VisionAir¹ and VisionAir². The installation of a Euromate Air Cleaner is simple and it can be anywhere: VisionAir¹ en VisionAir² on or in the ceiling or on the floor. VisionAir¹ can also be installed on or in the wall or it can even be placed on a stand. Grace is a fine freestanding model and is available in no less than seven colours. Whichever model you choose, Euromate Air Cleaners fit into each interior by their splendid design. They perform their clean task in style. And quietly. The sound level is lower than that of an average PC. Everything breathes comfort...

*The independent Building Standards Research and Information Association (BSRIA) evaluated the Particle Removal Rate and other characteristics of air cleaners. See the test results for yourself at the Euromate website (www.euromate.com).
